

Software Testing Academy

Innovative training concept

The field of Software Testing is currently facing a challenge: existing training programs are outdated and don't align with market needs. To tackle this issue, an innovative approach is being introduced.

This approach involves the creation of tailored training materials and resources, designed around individual learning pathways. These pathways will delve into three key areas: Agile Testing, Automation in Testing, and Accessibility Testing.

The training materials will be dynamic and engaging, designed to cater to the individual learner. They will consider the learner's prior knowledge, qualitative aspects, and basic conditions for learning. The materials will include a variety of resources.

What sets this approach apart is its commitment to open educational resources (OER). This means that all training materials can be applied and used in a wider context, enhancing their value and reach. The ultimate goal is to provide a comprehensive and innovative Learning material toolkit, changing the way we approach training in the Software Testing field.

The consortium

- CEPROF - Centros Escolares De Ensino Profissional

- Amaris Consulting (Spain)

- Quality Minds (Germany)

- WSEI – University of Economics and Innovation in Lublin (Poland)

Transnational Project Meeting #3

In May, we hosted the third Transnational Project Meeting (TPM) in Munich. This gathering of the Steering Committee (SC) and Technical Committee (TC) was a pivotal moment for our project. We reviewed our progress, made strategic decisions, and planned for the next eight months. We assessed our training model, discussed the development of training materials, and addressed the technical aspects of our e-learning platform. The meeting was not only productive but also a great time for all participants.
