# Software Testing Academy

## Last months of progress

The Software Testing Academy (STA) project is an innovative initiative that aims to provide high-quality online training for aspiring software testers. The project is led by a consortium of partners from different countries and sectors, who share a common vision of promoting software testing as a rewarding and accessible career path.

In the past few months, the project has made significant progress in developing and refining the curriculum, the platform, and the evaluation methods. The consortium has held two major meetings: the Transnational Project Meeting (TPM), where the project status and future plans were discussed, and the Piloting Joint Staff Training Workshops, where the capacities of the future agile learning coaches were built.

## The consortium

- CEPROF - Centros Escolares De Ensino Profissional

- Amaris Consulting (Spain)

- Quality Minds (Germany)

- WSEI – University of Economics and Innovation in Lublin (Poland)

## Training for aspiring software testers is coming

The next step of the project is to pilot test the courses that have been developed, using the online platform.

The target group of the project is anyone who wants to become a software tester, regardless of their previous experience or background. The project aims to involve people from diverse and disadvantaged backgrounds, to foster social inclusion and equal opportunities.

The STA project is an exciting and challenging endeavor that will contribute to the advancement of software testing as a profession and a field of study. The project team is looking forward to sharing the outcomes and the lessons learned with the wider community of stakeholders and interested parties.

## Check out our latest articles!

The article "Embracing the Change" by the Software Testing Academy explores the changes that are affecting the software engineering and testing industry, and how modern testers can adapt to them. We highlight the challenges and opportunities that software testers face in a dynamic and evolving environment, and suggest a holistic and strategic approach that covers skills, tools, practices, and mindset. The article also emphasizes the importance of learning from the past and embracing the future, as well as the value that software testers can deliver to their stakeholders.
